Privately published under the auspices of the

EXECUTIVE COMMITTEE OF THE

FRIENDS OF THE ARMY MEDICAL LIBRARY

Washington, D. C.

A gratifying response has been received to the invitation to join the organization of Friends of the Army Medical Library. About 500 enrollment cards were returned the first week. The expression of interest in the Current List of Medical Literature indicates that this undertaking will be of use to a sufficiently large number of persons to warrant continuation. In this connection it should be noted that the first issue contains imperfections which will be remedied by a better organization of our work. It is the intention to record, without selection, the titles of all papers of medical interest appearing in the more than 3000 periodicals and serials received regularly or irregularly by the Army Medical Library. From time to time the titles of new books acquired by the Library will be included.

It is realized that many of those who enroll as Friends of the Army Medical Library will not care to receive the Current List of Medical Literature. Nevertheless the publication will be sent for the present to all Friends, in the hope that those who do not need it themselves will bring it to the attention of others. Enrolled members who do not wish the Current List are requested to notify the Executive Committee.

This number of the Current List is the last one that will be sent to those who have not enrolled as Friends of the Army Medical Library or signified their desire to receive it. For the convenience of those who have not yet responded, a subscription blank accompanies the present issue. It is assumed that all who subscribe are interested in the purpose to be achieved by the Friends of the Army Medical Library and are willing to be automatically enrolled as members. It is expected that the names of the "Friends" will be published in a future issue of the Current List of Medical Literature.

Those research workers who are in the habit of perusing succeeding issues of periodicals whenever possible, will find that this Current List permits them to scan the Contents of a far larger number of journals than could ever be consulted under any but the most unusual conditions. It can be kept by each one for reference at any convenient time, and the reader is not restricted to brief periods spent in examining periodicals in Libraries. Microfilm copies of papers recorded in the Current List and desired in full, will promptly be made at the rates shown in the order blank on the inside rear cover of this issue, by
